Satech might still be one of the youngest companies in its market, nevertheless, it has become one of its most successful players, as the company offers a global production that focuses on in-house production exclusively. Soon after its foundation, when success became clearly visible, Satech established an excellent sales network in Italy as well as a design department that was to translate individual specifications of customers into customized products. In the past years, Satech has experienced continuous growth, not least thanks to its increased export activities.

"With new products and new services just around the corner, we can be sure to maintain our competitive edge in the market for protections systems as used in production environments"

Satech at a glance

2000	2001 - 2008	2009 - 2012	2012	2013 - 2014	2015	2016
Start of activities from the site of Calco, northern Italy	Establishment and development of the sales network	A boost to the export business following the opening of two technical branches in France and Germany.	Cooperation with important distribution partners and sales representatives are selling Satech products in all Europe.	Development of a new construction software that enables customers to start their own product constructions.	A new product line (ADAPTA - ADAPTA DP) is launched. one is extremely sturdy, showing great stability, both the mounting systems allow for easy assembly and disassembly.	*Two new production units are operative. A painting line and an automatic line for the production of pre-drilled posts.*

A **Safe** factory is a **Productive** one.

We produce all components at our production plants, including all posts and meshes. This is quite unique in the market, as no other competitors is able to construct tubes at their own site. Thus, we maintain full control over the entire production cycle, which increases our quality approach and gives us a competitive edge in the market.
